

Bijlage 3: Roundup formulation change – CONFIDENTIAL

Due to the recent decision at EU level to not allow the co-formulant POEA tallow amine in glyphosate containing plant protection product any longer, we wish to replace the POEA tallow amine with another non-classified surfactant in Roundup (N 6483).

The new composition for Roundup is attached. The composition is now identical to the composition of Roundup Evolution (N 11228) buiten reikwijdte verzoek For further product specifications and risk assessment we therefore refer to the evaluation of Roundup Evolution.

5.1.2.f Woo

At the same time, we wish to remove the non-professional uses from the registration as the business is no longer interested to maintain that use. We wish to maintain the professional uses for Roundup as currently registered.
